MEDICATION GUIDE
Ibandronate (eye-BAN-dr′oh-nayt) Sodium Injection
for intravenous use

Read the Medication Guide that comes with IBANDRONATE before you start taking it and each time you get a refill. There may be new information. This Medication Guide does not take the place of talking with your doctor about your medical condition or treatment. Talk to your doctor if you have any questions about IBANDRONATE.

What is the most important information I should know about IBANDRONATE?
IBANDRONATE Sodium Injection is given in your vein (intravenously) and only given by a healthcare provider. Do not give IBANDRONATE Sodium Injection to yourself.

IBANDRONATE may cause serious side effects including:
1. Low calcium levels in your blood (hypocalcemia)
2. Severe allergic reaction (anaphylactic reaction)
3. Severe kidney problems
4. Severe jaw bone problems (osteonecrosis)
5. Bone, joint or muscle pain
6. Unusual thigh bone fractures

1. Low calcium levels in your blood (hypocalcemia).
IBANDRONATE may lower the calcium levels in your blood. If you have low blood calcium before you start taking IBANDRONATE, it may get worse during treatment. Your low blood calcium must be treated before you receive IBANDRONATE. Most people with low blood calcium levels do not have symptoms, but some people may have symptoms. Call your doctor right away if you have symptoms of low blood calcium such as:
   • Spasms, twitches, or cramps in your muscles
   • Numbness or tingling in your fingers, toes, or around your mouth
Your doctor may prescribe calcium and vitamin D to help prevent low calcium levels in your blood, while you receive IBANDRONATE. Take calcium and vitamin D as your doctor tells you to.

2. Severe allergic reactions.
Some people who received IBANDRONATE Sodium Injection had severe allergic reactions (anaphylactic reactions) that led to death. Get medical help right away if you have any of the symptoms of a serious allergic reaction such as:
   • Swelling of your face, lips, mouth or tongue
   • Trouble breathing
   • Wheezing
   • Severe itching
   • Skin rash, redness or swelling
   • Dizziness or fainting
   • Fast heartbeat or pounding in your chest
   • Sweating

Severe kidney problems, including kidney failure, may happen when you receive IBANDRONATE. Your doctor should do blood tests to check your kidneys before you receive each dose of IBANDRONATE.

4. Severe jaw bone problems (osteonecrosis).
Severe jaw bone problems may happen when you receive IBANDRONATE. Your doctor may examine your mouth before you start IBANDRONATE. Your doctor may tell you to see your dentist before you start IBANDRONATE. It is important for you to practice good mouth care during treatment with IBANDRONATE.

5. Bone, joint, or muscle pain.
Some people who receive IBANDRONATE develop severe bone, joint, or muscle pain.

6. Unusual thigh bone fractures.
Some people have developed unusual fractures in their thigh bone. Symptoms of a fracture may include new or unusual pain in your hip, groin, or thigh.

Call your doctor right away if you have any of these side effects.

What is IBANDRONATE?
IBANDRONATE is a prescription medicine used to treat osteoporosis in women after menopause. IBANDRONATE helps increase bone mass and helps reduce the chance of having a spinal fracture (break).

It is not known how long IBANDRONATE works for the treatment of osteoporosis. You should see your doctor regularly to determine if IBANDRONATE is still right for you.

It is not known if IBANDRONATE is safe and effective in children.

Who should not receive IBANDRONATE?
Do not receive IBANDRONATE if you:
   • Have low levels of calcium in your blood
   • Are allergic to ibandronate sodium or any of the ingredients in IBANDRONATE.
   See the end of this leaflet for a complete list of ingredients in IBANDRONATE.
What should I tell my healthcare provider before receiving IBANDRONATE?

Before you receive IBANDRONATE, tell your doctor if you:

- Have low blood calcium
- Plan to have dental surgery or teeth removed
- Have kidney problems or other problems that may affect your kidneys
- Have been told you have trouble absorbing minerals in your stomach or intestines (malabsorption syndrome)
- Are pregnant or plan to become pregnant. It is not known if IBANDRONATE can harm your unborn baby.
- Are breast-feeding or plan to breast-feed. It is not known if IBANDRONATE passes into your milk and may harm your baby.

Tell your doctor and dentist about all the medicines you take, including prescription and non-prescription medicines, vitamins and herbal supplements. Know the medicines you take. Keep a list of them and show it to your healthcare provider and pharmacist each time you get a new medicine.

How should I receive IBANDRONATE?

- IBANDRONATE Sodium Injection is given 1 time every 3 months by a healthcare provider.
- If you miss a dose of IBANDRONATE, call your doctor or healthcare provider to schedule your next dose.

What are the possible side effects of IBANDRONATE?

IBANDRONATE may cause serious side effects.

- See “What is the most important information I should know about IBANDRONATE?”

The most common side effects of IBANDRONATE include:

- Pain in your bones, joints or muscles
- Back pain
- Abdominal pain
- Flu-like symptoms may happen within 3 days after you receive IBANDRONATE. Symptoms include:
  - fever
  - chills
  - bone, joint, or muscle pain
  - fatigue
  - If you have flu-like symptoms, they should get better within 24 to 48 hours.

Some people have pain or a sore that will not heal in their mouth or jaw while they receive IBANDRONATE. Tell your doctor or dentist if you have mouth or jaw problems.

Tell your doctor if you have any side effect that bothers you or that does not go away. These are not all the possible side effects of IBANDRONATE. For more information, ask your doctor or pharmacist.

Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088. You may also report side effects to Sagent Pharmaceuticals at 1-866-625-1618.

How should I store IBANDRONATE if I need to pick it up from a pharmacy?

- Store IBANDRONATE Sodium Injection at room temperature between 68°F and 77°F (20°C and 25°C).

Keep IBANDRONATE Sodium Injection and all medicines out of the reach of children.

General information about the safe and effective use of IBANDRONATE.

Medicines are sometimes prescribed for purposes other than those listed in a Medication Guide. Do not use IBANDRONATE for a condition for which it was not prescribed. Do not give IBANDRONATE to other people, even if they have the same symptoms you have. It may harm them.

This Medication Guide summarizes the most important information about IBANDRONATE. If you would like more information, talk with your doctor. You can ask your doctor or pharmacist for information about IBANDRONATE that is written for health professionals.
