Barbiturates are used as sedative-hypnotics and as anticonvulsants. They are weak acids that are rapidly distributed to all tissues and fluids. Barbiturates are metabolized by the microsomal enzymes in the liver, and their plasma levels are influenced by the degree of hepatic function. The biotransformation of barbiturates is inhibited by other substances and their plasma levels are increased. Barbiturates are contraindicated in patients with known barbiturate sensitivity. Barbiturates are also contraindicated in patients with a history of mental or liver pathology.

Drug Interactions

Barbiturates may interact with other drugs that have a similar effect on the central nervous system, such as alcohol and other central nervous system depressants. Barbiturates may also interact with other drugs that affect the metabolism of other drugs. Barbiturates may also increase the effects of other drugs that have a similar effect on the central nervous system, such as alcohol and other central nervous system depressants.

Protein Binding

Barbiturates are weak acids that are absorbed and rapidly distributed to all tissues and fluids. Barbiturates are metabolized by the microsomal enzymes in the liver, and their plasma levels are influenced by the degree of hepatic function. The biotransformation of barbiturates is inhibited by other substances and their plasma levels are increased. Barbiturates are contraindicated in patients with known barbiturate sensitivity. Barbiturates are also contraindicated in patients with a history of mental or liver pathology.

Nursing mothers

Caution should be exercised when a barbiturate is administered to a nursing woman since small amounts of barbiturates are excreted in the milk.

Pediatric Use

No adequate controlled studies have been conducted in pedi atric patients. Use in pedi atric patients is supported by numerous studies and case reports in adults. Use in pedi atric patients under 12 years of age is not recommended. Use in pedi atric patients 12 years of age and over is not recommended.

Pediatric dosing information for Pentobarbital Sodium is described in the DOSAGE AND ADMINISTRATION section.
